The final rule that provided for an administrative reporting exemption was issued in Dec 2008 and became effective Jan 2009. We were sued, tried mediation, then petitioned the court to pull it back to re-evaluate and re-propose. We are still in that re-evaluating phase. We told the court that part of the re-evaluation was to look at what the Office of Air was doing under the National Air Emissions Monitoring Study (NAEMS) and that we'd consider their emissions estimating methodologies (EEMs) once they were final/complete. Development of the EEMs has taken longer than expected.

thanks Lynn for responding so quickly. Remind me what happened on the reporting rule for animal waste - did we propose it? I thought I remembered that years ago ag started to submit their reports. What does EEM stand for?

Hi Alison,

I'm doing well, thanks. Hope you're enjoying your detail!

Depending on the area for agriculture, it is either me or someone from Craig Matthiessen/Kim Jennings Division (Regulatory Implementation Division) from the Office of Emergency Management. I am the contact for CERCLA/EPCRA reporting requirements issues/questions, RID does SPCC/FRP/RMP guidance/regulations. There could be other Offices within OSWER that deal with Agriculture; however, I'd need to know the specific issue in order to point you to someone.

I'm cc'ing Craig and Kim on this email.

With respect to the CERCLA/EPCRA reporting rule for air releases of ammonia from animal waste. It's on hold now – still waiting for EEMs.

Hi Lynn - hope all is well with you. Who would be the best person for me to talk to regarding any work in OSWRE related to agriculture??? What ever happened to the CERCLA/EPCRA reporting rule for manure?? Thanks!
